DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13, 31-32, and 38-39, drawn to a method for powering a cold cathode fluorescent light (CCFL), classified in class 315, subclass 291.
 - II. Claims 14-25, drawn to a system for powering a cold cathode fluorescent light (CCFL), classified in class 315, subclass 209PZ.
 - III. Claims 26-32, drawn to clamping circuitry, classified in class 327, subclass 321.
 - IV. Claims 33-37, drawn to driver circuit, classified in class 315, subclass 224.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II-IV and I are related as products and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the process for using the product in groups II-IV can be practiced with another materially different product. For example, the system for performing the process as described in-group I may not comprise any integrator, control loop, comparator, n-type transistor etc. The system may comprise microprocessor, register, optic controller, etc. instead of the particulars found in groups II-IV.
3. Inventions II and III&IV are related as combination and subcombinations. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not

Art Unit: 2821

require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because group II does not require a comparator, capacitor, etc. in the clamp circuitry as described in group III or require a pulse generator circuit as described in group IV. The subcombination has separate utility such as using in a printer, display, computer, high intensity discharge lamp lighting, etc.

4. Inventions III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as printer, display, computer, high intensity discharge lamp lighting, etc. See MPEP § 806.05(d).

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
